Solution Guide

(E 🕼

Thank you very much for selecting Autonics products. For your safety, please read the corresponding product manuals before using them

Autonics

Preface

Thank you very much for selecting Autonics products.

Please familiarize yourself with the information in this manual and in the product manuals before using them.

This solution guide contains information about a specific architecture solution and does not replace any specific product documentation.

This document does not attempt to describe the entire solution architecture and configuration but only introduce some basics procedures. Customization of this solution can be made by the users in respect of safety laws and regulations.

Document Guide

- This manual provides procedure steps for a particular solution architecture. It does not offer any guarantee concerning matters beyond the scope of this manual.
- This manual may not be edited or reproduced in either part or whole without written permission of Autonics.
- This manual is not provided as part of the product package. Please visit our home-page (www.autonics.com) to download a copy.
- The content of this manual may vary depending on updates of the product software and others unforeseen developments within Autonics. It is subject to change without prior notice. Upgrade notices are published through our homepage.
- We contrived to describe this manual the easiest and more accurate way. However, if there are any corrections required or questions, please notify us these remarks on our homepage.

1 Solution Overview

1.1 Solution description

Autonics GP-S070-T9D6 device from the GP/LP series is a 7.0 inch LCD color touch panel with build-in serial connection through RS-422 and RS-232C ports. It is a standalone screen with custom OS and dedicated graphic editor software to create up to 500 graphic pages.

Thanks to its characteristic, it can be added on top of any existing automation architecture with different type of serial connection and can monitor different devices parameters or statuses and key Setting Values or Present Values, facilitating the access to data that was not in the previous architecture.

This solution brings following benefits to your current installation:

- > Allows to monitor in real time PLC & devices status and feedback values
- > Allows a convenient control of the different parameters and setting values
- > Allows a fast and clear notification of the different alarms

This solution is optimized because:

- Can be simply added on top of your current installation
- > Very small dimension so can be installed close to the controlling device for or local control
- Internal graphics and control functions for standalone application without need of server or OS licensing.

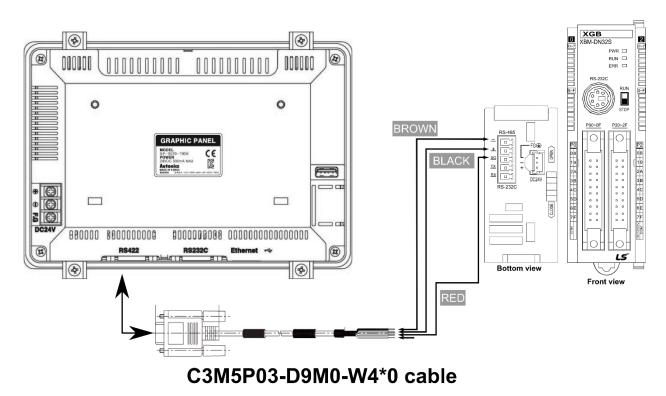

1.2 Solution components and version

Communication cable pin details and dimensions 1.4 (Autonics model: C3M5P03-D9M0-W4*0)

2 GP-S070 Communication Settings

The GP device should be set to use its RS422 port and to control data registers of a XBM type device.

So we need:

- to create a GP-Editor project with XBM connection and different graphical components to interact with the XBM registers
- to set communication parameters of the GP device to allow a connection with the PC and GP-Editor
- to send the GP-Editor project to the GP device
- to check the serial communication settings of the GP connection with the XBM PLC.

Remarks:

In this document, we will use an Ethernet connection to download the GP-Editor project to the GP device, please refer to the 'GP-Editor Download Manual' if you want to use another method (serial connection or USB connection).

2.1 GP-Editor project settings

- 1st Run the GP Editor software and select [Project] [New] in the menu bar. If you already build a project file, open this project by selecting [Project] [Load] in the menu bar.
- 2nd In the 'GP/PLC Type' dialog box, set 'GP/LP Type', CH1/2 'Group' and 'Type' as bellow then click 'OK'.

GP/PLC Type	2
GP/LP Type : GP-S070 T9D6 (800 X 480) ▼	1
CH1 Group : NoUse	
CH1 Type : NoUse	
CH2	1
CH2 Group : LS XGB SERIES	
CH2 Type : XBMDR16_CPU_Cnet MASTER	
Cancel	

Item	Settings
GP / LP Type	GP-S070 T9D6
CH1 Group / Type	No Use
CH2 Group / Type	LS XGB SERIES / XBMDR16_CPU_Cnet

3rd In the 'Project Auxiliary Property' dialog box click 'OK'. The graphic editor page will be displayed.

Project Auxiliary Property	x
Basic Key Window Language Serial Port Setup Menu Key	
Configure Key Window / Cursor Display Operate for screen switching : Display Cursor Only Call key window when detecting touch Call key window when detecting touch Application of serial port, setup, menu key, configuration Image Color 256 color Form	
OK Cancel	_

4th The project has been properly initially set. Then you need to create your own graphics and set links between GUI components and the XBM PLC registers.

Rem: Please refer to the 'GP-Editor User Manual' document for procedures on graphics creation or to the example section of this document for a simple interface example.

2.2 GP-S070 Ethernet communication settings for GP-Editor

1st First check the computer IP settings:

On the PC, go to [Control Panel] – [Network and Sharing Center] – [Local Area Connection] – [Properties], click on 'Internet Protocol Version 4 (TCP/IPv4) and 'Properties'.

📮 Local Area Connection Properties 📃 💌		
Networking Sharing		
Connect using:		
Realtek PCIe GBE Family Controller		
Configure		
This connection uses the following items:		
 Client for Microsoft Networks VirtualBox NDIS6 Bridged Networking Driver QoS Packet Scheduler File and Printer Sharing for Microsoft Networks Internet Protocol Version 6 (TCP/IPv6) Internet Protocol Version 4 (TCP/IPv4) Ink-Layer Topology Discovery Mapper I/O Driver Link-Layer Topology Discovery Responder 		
<u>Install</u> <u>Uninstall</u> <u>Properties</u>		
Description Transmission Control Protocol/Internet Protocol. The default wide area network protocol that provides communication across diverse interconnected networks.		
OK Cancel		

2nd Note your IP address and default gateway to later set properly the GP address.

Autonics

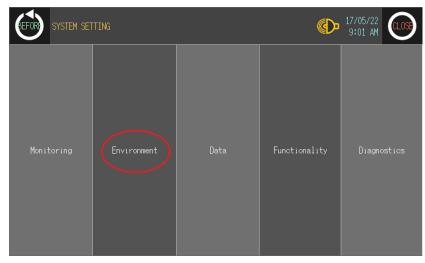

Internet Protocol Version 4 (TCP/IPv4)	Properties 🛛 🔋 💌
General	
You can get IP settings assigned autor this capability. Otherwise, you need to for the appropriate IP settings.	
Obtain an IP address automatical	ly
• Use the following IP address:	
IP address:	169 . 192 . 1 . 10
S <u>u</u> bnet mask:	255.255.255.0
Default gateway:	169.192.1.1
Obtain DNS server address autor	natically
• Use the following DNS server add	resses:
Preferred DNS server:	· · ·
<u>A</u> lternate DNS server:	· · ·
🔲 Valjdate settings upon exit	Ad <u>v</u> anced
	OK Cancel

3rd On the GP-S070 device, click on the top-left of the screen to open the 'System Setting' menu.

\bigcirc						
	USER	SCREEN	IS NOT	FOUND		

Rem: if the 'System Setting' menu does not appear, the default menu shorcut has been changed. Try to click on the other corner of the touch panel or refer to the 'GP-S070 - User Manual'.

4th Select 'Environment'.

5th Select 'Local Ethernet'.

SYSTEM SETTING LENVIRONMENT	(LOS) 17/05/22 9:03 AM
Serial Communication	Language
Local Ethernet	Screen Bright
Assistance Setting	Clock

6th Set the Ethernet settings as below:

Items	Settings	Comment
IP Address	169.192.1.12	With last digit unique number on the network
Station	255.255.255.0	Same that the PC
Device	169.192.1.1	Same that the PC

GEFOR SYSTEM	SETTING\ ENVIRONMENT\ LOCA	L ETHERNET	(C) 17/09	5/22 A AM
	IP Address	169.192. 1. 12		
	Subnet Mask	255.255.255.0		
	Gateway	<u>169.192. 1. 1</u>		
	MAC Address	00 - 00 - 00 - 00 - 00 -	- 00	

7th Click on 'CLOSE' to validate the changes.

2.3 Send GP-Editor project to GP-S070 device by Ethernet

1st In GP-Editor, select the [Communication] – [Download] menu, and click on 'Setting'.

Monitor Data Download		×
Configuration Base Window Other	1	_
Tag • All Data	C Selected Data	
Protocol download		
Project Title :		
Project ID :	831023027	
GP/LP Type :	GP-S070 T9D6 (800 X 480)	
Download Close Si	etting Size: 0.5KB Sector: 3	

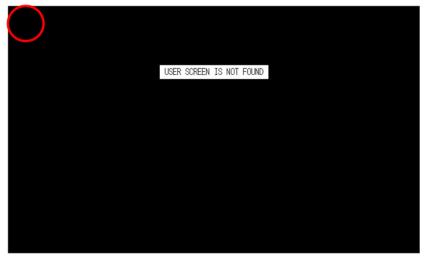

2nd In the 'Option' window, select 'Ethernet' and write the GP IP address in the 'Target IP' or automatically look for your device by selecting the good 'LANCard IP', clicking on the 'Refresh' button and selecting the device that appears int the result table.

Option				×
File Browse	Communication			
C	Serial	 Ethernet 	O USB	
	Tankin		4 45	_

Modem Initialization:			
Time Settings			
Response Waiting Time: (0-50)(*100ms)	1		1
Delay Time Setting: (0-255)(*10ms)	0		0
Delay Time Between Character: (0-255)(*10ms)	1		1

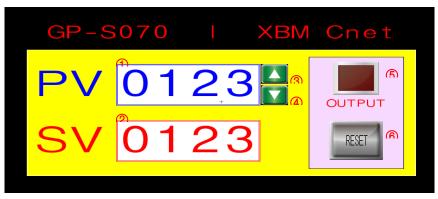

5th The project has been properly set. Then you need to create your own PLC program and download the complete project to the XBM device by selecting [Online] – [Write], then clicking 'OK'.

Rem: Please refer to the XG5000 documentation for procedures on Ladder program creation and other method to write project to a XBM device.

4 GUI Example

4.1 Solution overview

4.1.1 GP-S070 drawing (in GP-Editor from Autonics)

4.1.2 PLC program (in XG 5000 from LS)

					(R)
_ON 2	CTUD	C0000	M00000	M00001	D00000
					END

Rem: We will not describe how to create a Ladder program under XG 5000 in this document. Please refer to the XG 5000 documentation for more information.

4.2 GP-S070 – XBM connection

GP-SC	GP-S070			ХВМ	
Item	Tag Property	Usage	Bit	Word	
1	Numeral display Counter present value			C0	
2	Numeral input Counter set value		_	D0	
3	Touch key (momentary)	Input (Up)	MO	_	
4	Touch key (momentary)	Input (Down)	M1	_	
5	Lamp	Counter output	C0	_	
6	Touch key (momentary)	Reset	M2	_	

In this example, we will set the communication address:

- of the XBM device to 1

- of the GP-S070 device to 0

4.3 **GP Editor graphic**

4.3.1 Numeral display

1st Select [Draw] – [Numeral Display] in the menu bar. Click 'Device' then set the device parameters as below.

Sottings		
Settings		
[CH2]XBMDR16_CPU_Cnet		
XBM communication address		
CO

5 Appendix

5.1 Serial communication settings

The serial communication parameters can be set in GP-Editor or directly on the GP device.

The following table shows which port can be set by using the 2 differents methods.

ltem	Setting in GP Editor	Setting in GP-S070 device
CH1 comm. setting	Available	Available
CH2 comm. setting	Unavailable	Available

5.1.1 Change CH1 communication settings in GP-Editor

1st Select [Common] - [Auxiliary Configuration] - [Project] in the menu bar. Check the 'Application of serial port, setup, menu key, configuration' if it is not already done.

Project Auxiliary Property					
Basic Key Window Language Serial Port Setup Menu Key					
Configure Key Window / Cursor Display Operate for screen switching : Display Cursor Only Call key window when detecting touch Call key window when detecting touch					
OK Cancel					

Project Auxiliary Property			<u></u>
Basic Key Window Langu	age Serial Port Set	up Menu Key	
Port Configuration —			
Baudrate :	19200bps	•	
Handshaking :	XON/XOFF	•	
Parity :	None	•	
Data Bit :	8bit	•	
Stop Bit :	1bit	•	
	ОК	Cancel	

2nd In the [Serial Port] tab, set CH1 port configuration.

3rd In the [Setup] tab, select CH1 port type and set station numbers. The other available port will be allocated to the CH2 port.

Project Auxiliary Property				
Basic Key Window Language Serial Port Se	tup Menu Key			
Preserve time of opening screen :	5 • (SEC)
