Output operation mode : FK, FK I

Output operation mode : ON OFF D, ON OFF D I

※It is able to change the setting time during the time progressing, but be sure about the time progressing while changing of the time.
※If pressing key while setting time is shorter than min. setting time, setting value will be flickering three times and it will be returned to setting mode again, not to RUN mode.
※If there is no additional key operations after entering into setting mode, it will be return to RUN mode. (Setting value is not saved.)
※Min. Setting time: 0.01 sec.
(In case of OND, OND I and OND II modes, it is able to set 0 since no min. setting time is applied.)

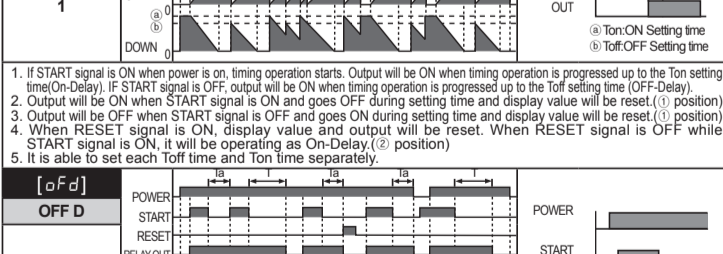

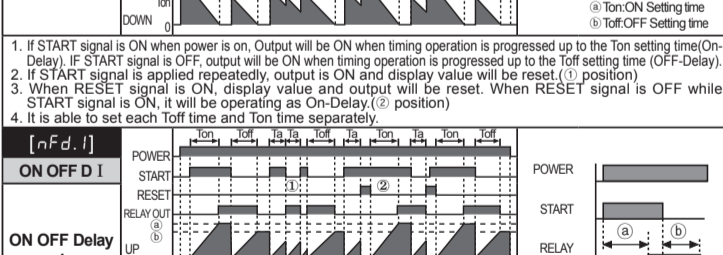

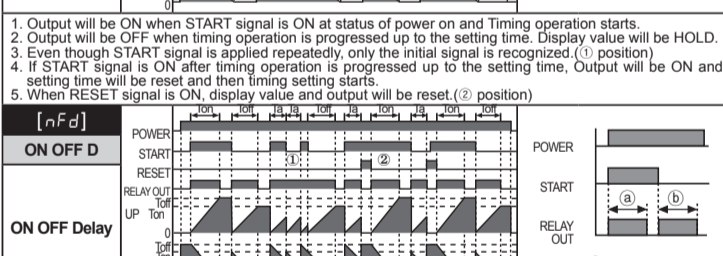

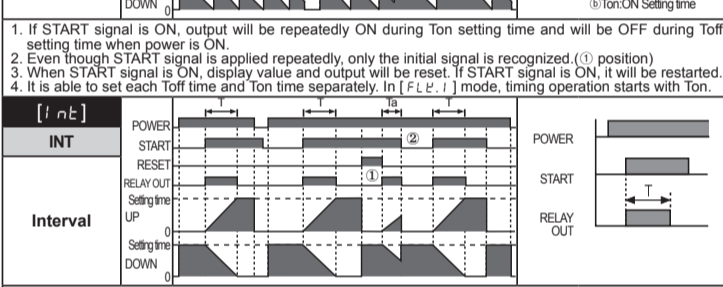

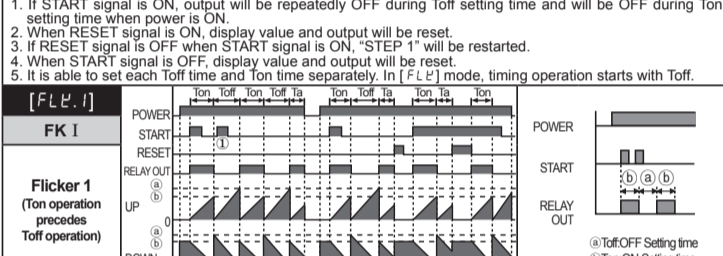

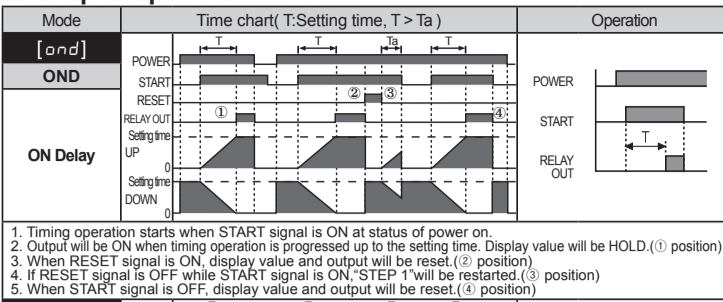

Cautions during Use

- Follow instructions in 'Cautions during Use'. Otherwise, it may cause unexpected accidents.
- When supplying or turning off the power, use a switch or etc. to avoid chattering.
- Install a power switch or circuit breaker in the easily accessible place for supplying or disconnecting the power.
- In order to block peripheral current, use isolation transformer which of secondary part is not grounded as (Figure 1) to supply power to the external input device.

- Do not connect two or more timers with only one input contact or transistor simultaneously.
- Keep away from high voltage lines or power lines to prevent inductive noise.
- In case installing power line and input signal line closely, use line filter or varistor at power line and shielded wire at input signal line.
- Do not use near the equipment which generates strong magnetic force or high frequency noise.
- This unit may be used in the following environments.
 - Indoors (in the environment condition rated in 'Specifications')
 - Altitude max. 2,000m
 - Pollution degree 2
 - Installation category II
